

BUILT FOR CREATORS WHO WANT A SAY

AI creates. You direct.

A creative studio that keeps you in control of the story, scene by scene.

Your idea → Your choices → Your final cut

What if you love one scene and want to change everything else?

I built Marketing Studio around that question.
Here's what grew out of my 8x assignment.

01 / THE CREATOR'S PROBLEM

A great clip is only the beginning

I ran into the same friction while making my own videos.

01 The story still needs choices

Which shot fits? What stays? What gets left out?

02 The clips still need an edit

A sequence, the right timing, a voice.

03 The edit still needs a render

A finished timeline is another step from a finished file.

That became the product brief:
connect the work, keep the creator in control.

02 / THE DOCUMENTARY WORKFLOW

Your script. Your scene choices.

Review the script. Explore up to three stock-footage options per scene. Pick one or skip it.

SCENE 02

CHOOSE YOUR SHOT

“The city begins before the sun comes up.”

01

Wide shot

The city skyline

02

Street level

The morning commute

03

Close-up

A café opening

✓ Your selection

Next scene →

Illustrative scene selection

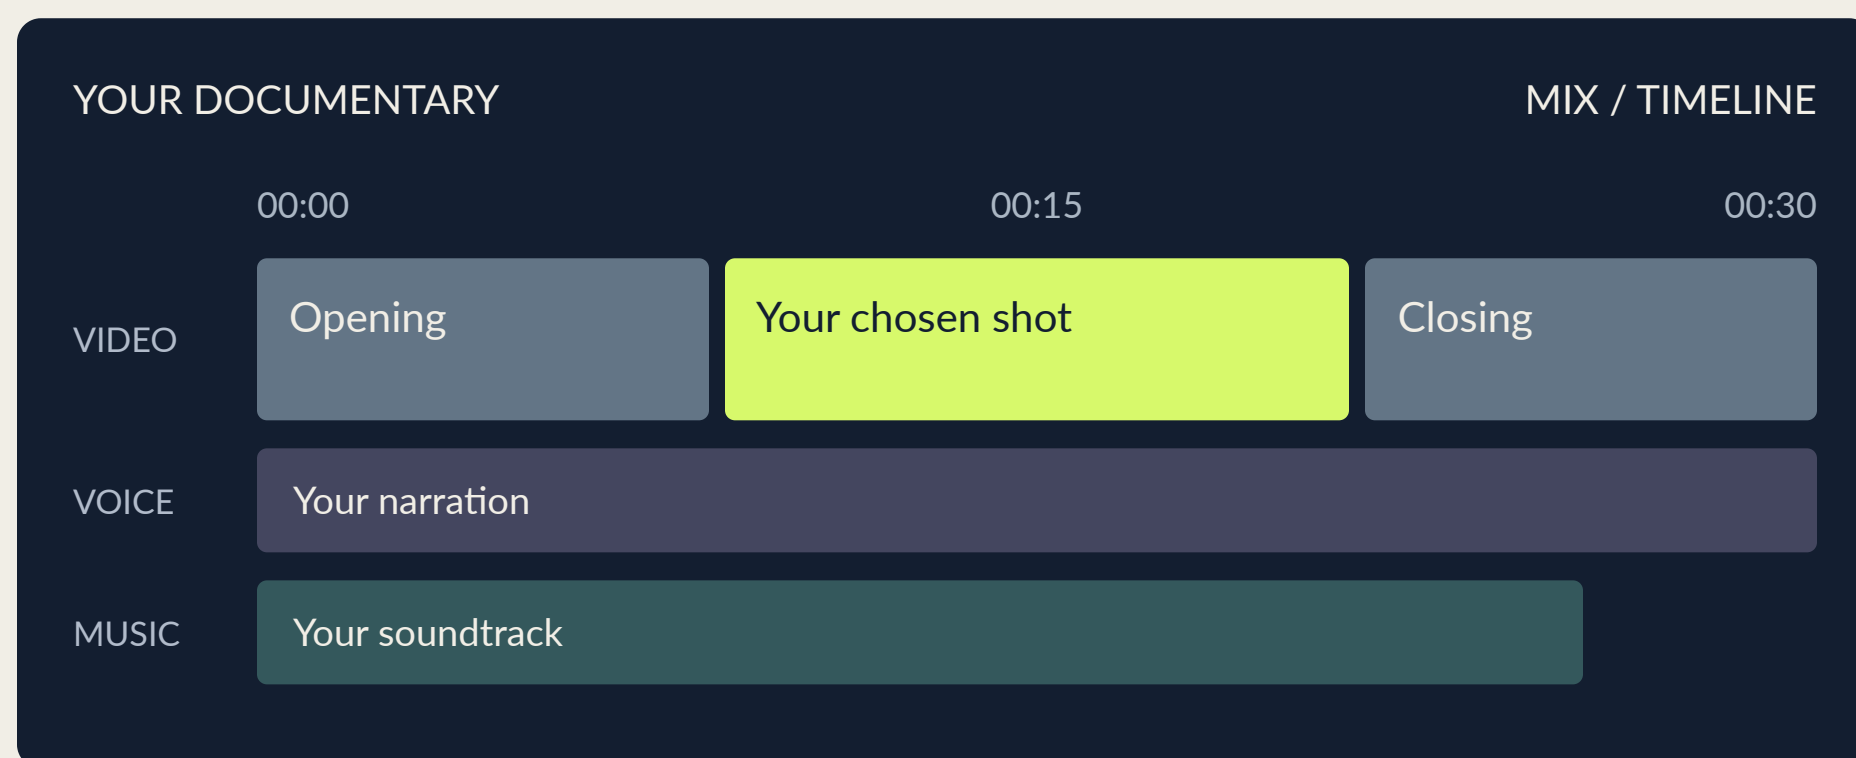

The first result is a starting point.
You decide what belongs.

03 / THE CUSTOM EDITOR

The final cut stays yours

Your selected scenes and narration come together in the editor. Arrange clips, trim timing, and refine the story.

Illustrative editing timeline

Your timeline → **Cloud rendering pipeline**

Cloud export is integrated. Live export verification is still in progress.

The goal: keep heavy rendering off the creator's laptop.

04 / A WIDER CREATIVE WORKSPACE

One identity. More ways to create.

Save an avatar and reuse it across image looks, video templates, and effects.

Your avatar → Images / Videos / Effects

Visuals

Image tools and reusable templates for your next creative direction.

Audio

Voice, music, and sound effects in the same studio.

Documentaries

A script, scene choices, and an editable timeline in one project.

For explainers, brand stories, and creators building a recognizable presence.

05 / THE ENGINEERING BEHIND IT

A studio backed by a real system

Open-source models and hosted APIs, connected through asynchronous jobs.

The application

React on Vercel + Express API on EC2

Submit a job. Track its progress.

The HTTP request doesn't wait for the model.

GPU workers

RunPod images
Modal video infrastructure

CPU workers

Face swaps
FFmpeg rendering pipeline

Cloudflare R2 media storage + Supabase project data

Heavy compute lives in workers.
The app coordinates the workflow.

06 / BEYOND THE ASSIGNMENT

A creative product. A business taking shape.

A public domain and the foundations
to turn creative usage into paid plans.

Google sign-in

Accounts and private projects

Payment integration

SwichNow hosted checkout

Free / Pro / Premium

Plans with usage quotas

Persistent projects

Return to your creative work

Creators: what would you make?
Builders & investors: let's talk.
